Welcome from Professor Finbarr Allen

I am delighted to welcome you to the scientific conference to celebrate the centenary of Cork Dental School and Hospital, the theme of which is a "100 years of Dental Evolution".

We have witnessed many changes in dental care over those 100 years, and patient care has been underpinned by evolution of dental education, training and research. A century ago, things we take for granted now were inconceivable, for example, the ability to predictably bond materials to teeth and anchor prostheses with dental implants. Our understanding of biological processes has advanced to the stage that it is now very realistic for the majority of people to maintain a functioning and natural dentition for life. Graduates from Cork Dental School and Hospital have made a significant contribution to these advances.

Our speakers today are among those graduates, and have been asked to give you a flavour of the advances that have been made in their fields of expertise and where the developments of the future lie.

In addition to the speakers, we also welcome the support we have received from a number of dental companies. It would be impossible to host such a conference without their financial support, and we greatly appreciate this.

Please take the time to visit them in the trade stand area during the conference.

We hope you enjoy the conference and the chance to meet with colleagues and friends past and present.

Professor Finbarr Allen
