AHSS Impact: The Newcastle Experience

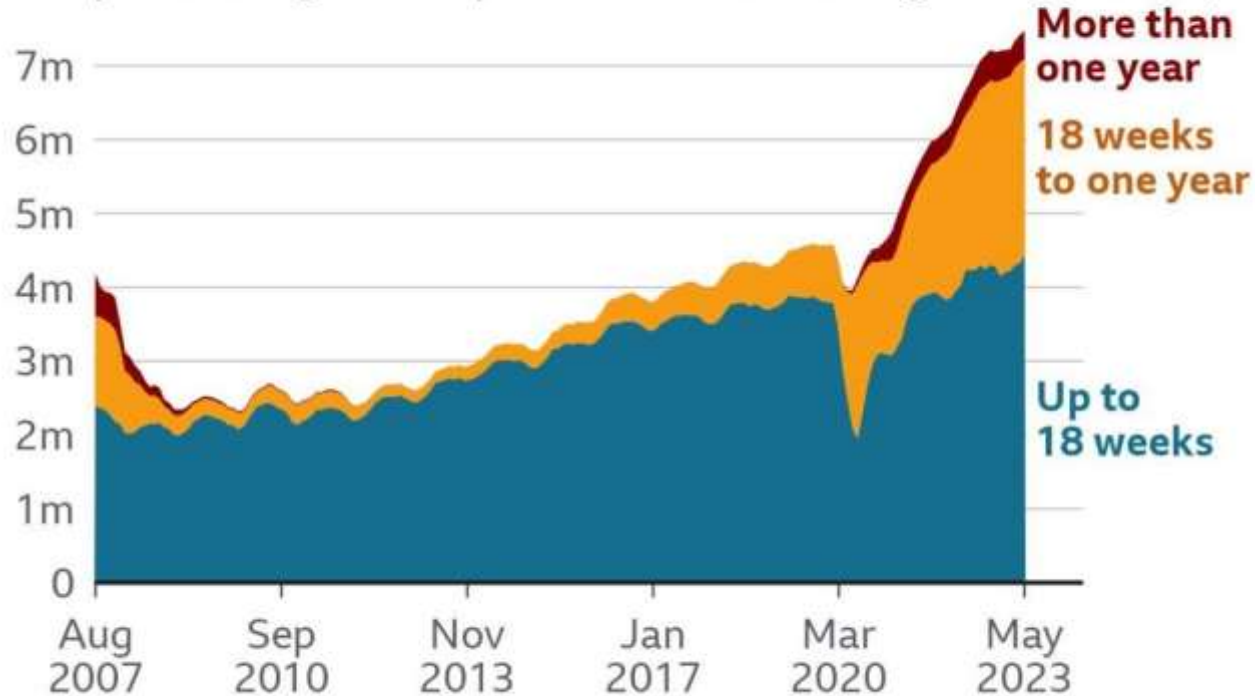

David J Burn, Director NHIP

Can AHSCs help with these problems?

Record numbers waiting for treatment

People waiting for hospital treatment in England (millions)

Source: NHS England, data to May 2023

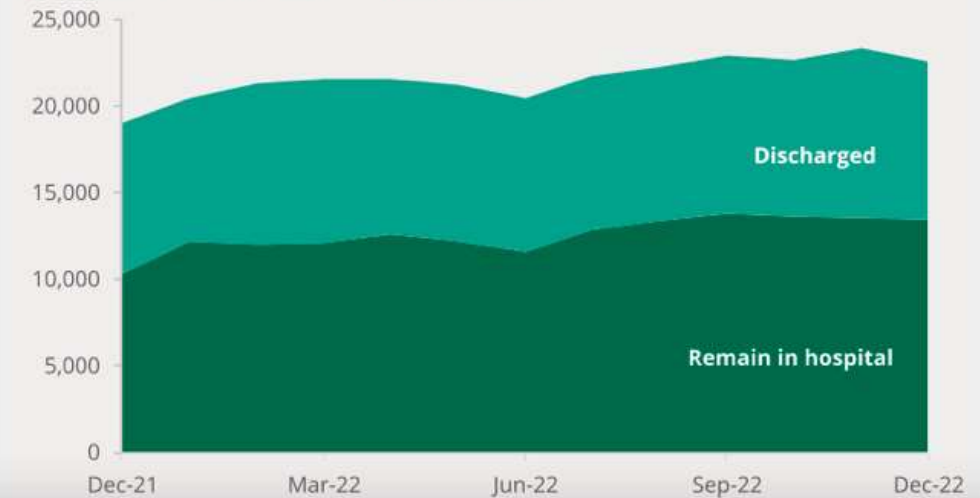

Number of delayed discharges

Since December 2021 NHS England has [published data on patients in England remaining in hospital who no longer meet the criteria to stay](#).

The latest data shows that in December 2022, an average of 13,440 patients per day remained in hospital despite being ready to leave. This is 30% higher than the December 2021 daily average of 9,150.

Outcomes for patients who no longer meet the criteria to reside

England: average daily numbers in acute hospitals

The wider health & social care ecosystem

Evidence of the benefits of being research active

- **Better patient care outcomes**
 - Patients at research active hospitals have more confidence in staff
 - Study activity & mortality rates
 - Cancer survival outcomes in hospitals with high research participation
- **A happier workforce**
 - Retention of staff improved with an increased academic component in job plans
 - Inverse relationship between the amount of time physicians spend on work they find meaningful and risk of burnout
- **Benefit for the health and care system**
 - Research improves clinical practice, reduces the cost of healthcare and drives policy change
 - Transforming health through innovation
 - Engagement of clinicians and organisations in research & healthcare performance

Introduction

- Newcastle Health Innovation Partners came into existence on 1st April 2020
- It is an AHSC designated by the National Institute for Health & Care Research (NIHR) & NHS-England (NHS-E)
- It is accountable, & reports to, both NIHR & NHS-E

- **What we said we would do**
- **The “reality”**
 - Important points that have emerged
 - Work in progress
- **Some reflections / questions**

Newcastle Health Innovation Partners

Our Academic Health Science Centre
for the North East and North Cumbria

POWERED BY

A CRITICAL CHALLENGE

The North East and North Cumbria has the highest rates of poverty (22%), unemployment (12%), poor health and early death in England

A POWERFUL PARTNERSHIP

Through this unique and powerful partnership we
leverage immense strength of opportunity and place

To deliver a bold, new venture to
tackle health, wealth and wellbeing

And **overcome poor health, poverty
and early death in our region**

We are a **diverse region of mixed urban and rural geography** with a population of 3.2 million

**Outstanding
clinical services**

**Translational
research**

**Excellence in
education**

The success of our Centre will build directly on UK-leading clinical care

Rated '**Outstanding**' in 2016 and 2019 - the only NHS Teaching Hospital to receive this rating twice

Rated '**Outstanding**' in 2016 and 2018

Top rankings for research

NUTH 1st in the country for open NIHR portfolio studies (2011-18)

CNTW 3rd amongst Mental Health Trusts for patient recruitment to NIHR studies (2018/19)

How we will address our priorities

Excellence in translational research & education
Outstanding NHS services

Consolidated and expanded partnerships

Highly developed multidisciplinary approach

Multi-partner test-beds for research, training and commercial innovation

Place-based approach for rural and city populations

Co-create with policy makers in health and social care, regulatory science and inward investment

Health, wealth, and wellbeing benefit for the region

We will deliver through the power of our partnership

NHS Global Digital Exemplars

A “Pathfinder Site” to deliver the Accelerated Access Collaborative

AHSCs are partnerships between top universities and NHS organisations that combine excellence in research, health education and patient care.

The newly designated NIHR and NHS England and NHS Improvement Academic Health Science Centres (AHSCs) will harness the strategic alignment of the NHS organisations and their university partners to improve health and care through increased translation of

Important points

- Partner CEO commitment critical
- English AHSCs do not come with funding
 - Partner contributions
 - Leveraging other funding
- Reporting has evolved to both NIHR & NHS-E
 - Implications
- Levers & amplifiers to effect impact & reduce inequalities
- Chief Operating Officer appointment
- Branding, communications & integrating into organisational DNA
- Integrated Care Strategy NENC

**NEWCASTLE
HEALTH
INNOVATION

Research pillars (our “USP”)

**Ageing &
MLTCs**

**Rare
diseases**

Diagnostics

Therapeutics

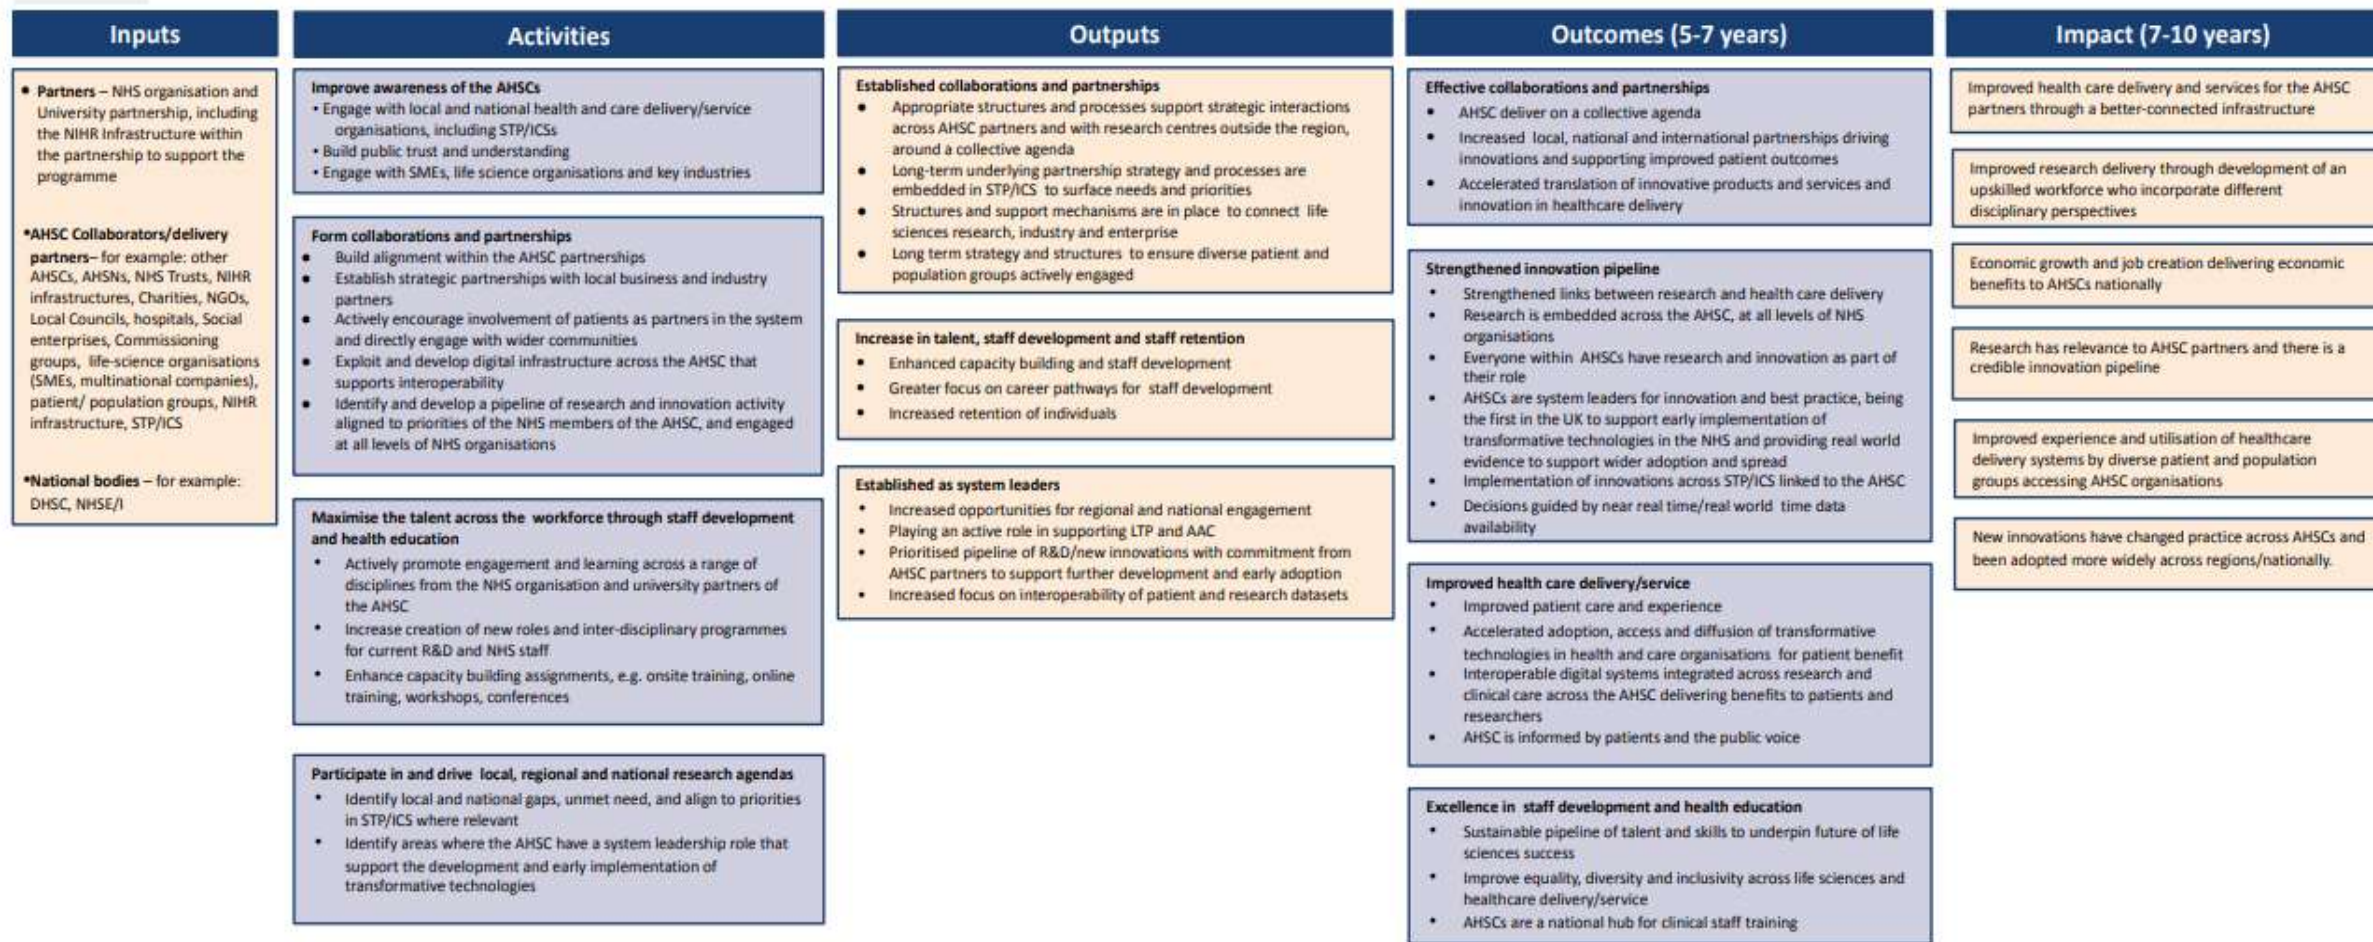

Data Science & health inequalities

Academic Health Science Centre (AHSC) Scheme Level Logic Model

Aims & Purpose of AHSCs:

- Harness strategic alignment of the NHS organisations and their university partners to improve health and care delivery/service through increased translation of discoveries from early scientific research into benefits to patients and population health.
- Deliver and harness world-class research, excellence in health education, and excellence in patient care (tripartite mission)

- Facilitate acceleration of improvements to healthcare through both local and national collaborations and by working with other AHSC and NIHR infrastructure
- Contribute to local and national economic growth by broader engagement of local authorities and industry
- Support delivery of commitments and goals in the NHS Long Term Plan, Life Science Industrial Strategy and Accelerated Access Collaborative

External factors

- AHSCs are reliant on leveraging funds and changes in the funding landscape may impact resourcing levels
- Significant contributions made to aid the national Covid-19 recovery at the expense of other activity areas
- Changes and restructuring within the NHS landscape (esp. Over next 12 months - Integrated Care System), plus impact of Brexit
- Reluctance in adoption and spread of inventions by others poses a challenge
- Lack of incentivisation or capacity of ICS' to engage with the AHSCs

Assumptions:

- AHSCs are regional structures with critical mass of scientific and clinical expertise, encapsulating universities, research institutes and hospitals, community, local authority and social care partners, working collectively to support the adoption and spread of innovations, with outputs that have national coverage/reach.
- AHSCs drive research and innovation which is developed in partnership with the health and care system, and work closely with AHSNs to support implementation and early adoption.
- Each AHSC has a local or regionally specific operating model and governance structures, as may have their own logic model to represent these differences.

Integrated Care System North East & North Cumbria

ICSs have been born in difficult times. The answer is not simply more money, although of course that is needed, particularly in social care. Unless we transform our model of health and care, as a nation we will not achieve the health and wellbeing we want for all our communities - or have the right care and treatment available when it is needed.

Hewitt Review April 2023

9.3.1 Research and innovation

The ICP is home to many research and innovation organisations, institutes and infrastructure, that collectively result in a vibrant ecosystem that is unique across England.

NENC ICS Strategy Dec 2022

Research & Innovation Initiatives

Effective primarily through convening & catalysis

- Research satellites
- Secure Data Environment for citizen benefit
- AI Multiply
- Dragon's den
- Workforce mapping

NEWCASTLE
HEALTH
INNOVATION
PARTNERS
DISCOVER. DEVELOP. DELIVER

Research Satellites

- Areas of perceived emerging strength
- At least two partners, usually more
- Forum for discussion of emerging ideas & funding opportunities
 - Robotic surgery
 - Advanced therapeutics
 - Mental physical health interface
 - Sustainability linked to healthcare
- Pump-priming support possible

The Topol review & digital health

The review proposes **three principles** to support the deployment of digital healthcare technologies throughout the NHS:

1. Patients included as partners and informed about health technologies
2. The healthcare workforce needs expertise and guidance to evaluate new technologies, grounded in real-world evidence.
3. The gift of time: wherever possible the adoption of new technologies should enable staff to gain more time to care

And **four themes**:

1. Genomics

2. Digital medicine

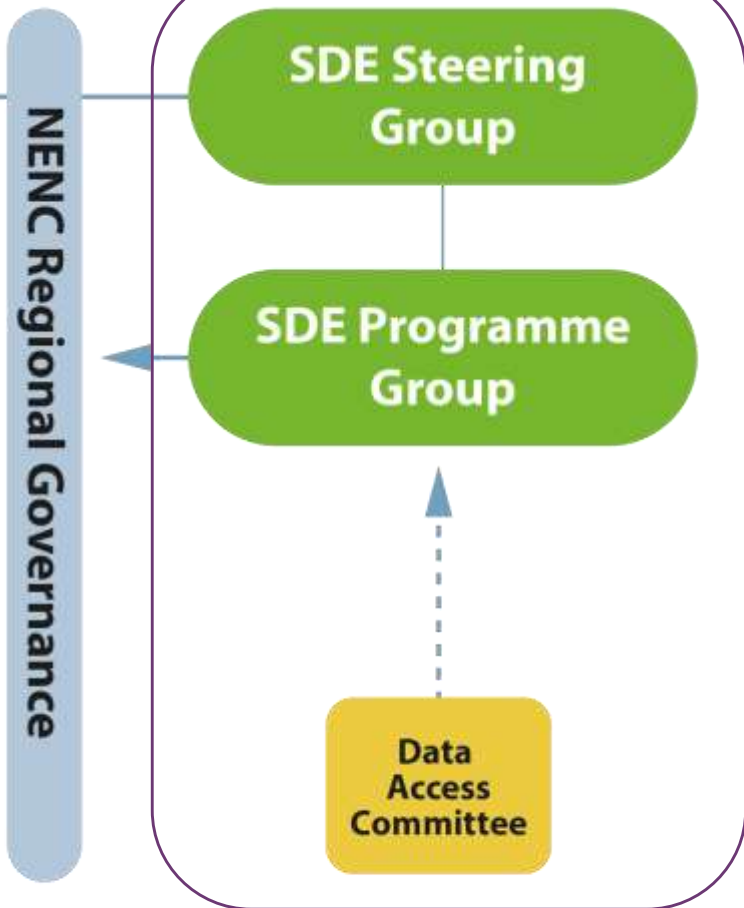

3. AI & robotics

4. Organisational development

Secure Data Environment governance

- Clinical/
healthcare
professionals
- Research
and
development
- SDE Public
Advisory
Group
- NENC SDE
Academic
(EPSRC)
- Possible
Advisory
Groups

SDE Steering Group

- Approves the SDE governance and hosting / services arrangements
- Leads regional SDE strategy, hosting, governance and service development
- Approves strategy/policy/investment decisions for SDE
- Establishes strategic priorities
- Holds quarterly performance reviews of SDE strategy, plans and deliverables

SDE Programme Group

- Planning/monitoring of the SDE implementation
- Partnership development/management (collaboration agreements , accession)
- Approves projects and governs pipeline and tracks implementation
- Quarterly performance reviews
- Finance and procurement monitoring

Data Access Committee

- Trusted authority comprised of members who are responsible for overseeing access to NENC health and care data for research and development
- Provides advice / recommendations to the Programme Group as to whether to release the data to the project

Workforce Mapping

- Where does our workforce come from? Which communities?
- Why is recruitment non-uniform across both city & region?
- Can we encourage engagement from under-represented communities?
- Data & engagement project
 - NHS & Council workforce: which communities?
 - Where are the gaps?
 - Engage with those communities to understand attitudes / blocks
 - Develop strategies to attract these communities into the workforce

Clinicians from medical, dental, pharmacy, allied health, healthcare sciences & nursing professions already form an essential part of our research & education community

We have extended our programmes into public health, social care & applied research methodology to reflect emerging national opportunities & priorities

Health innovation neighbourhood: achieving the vision

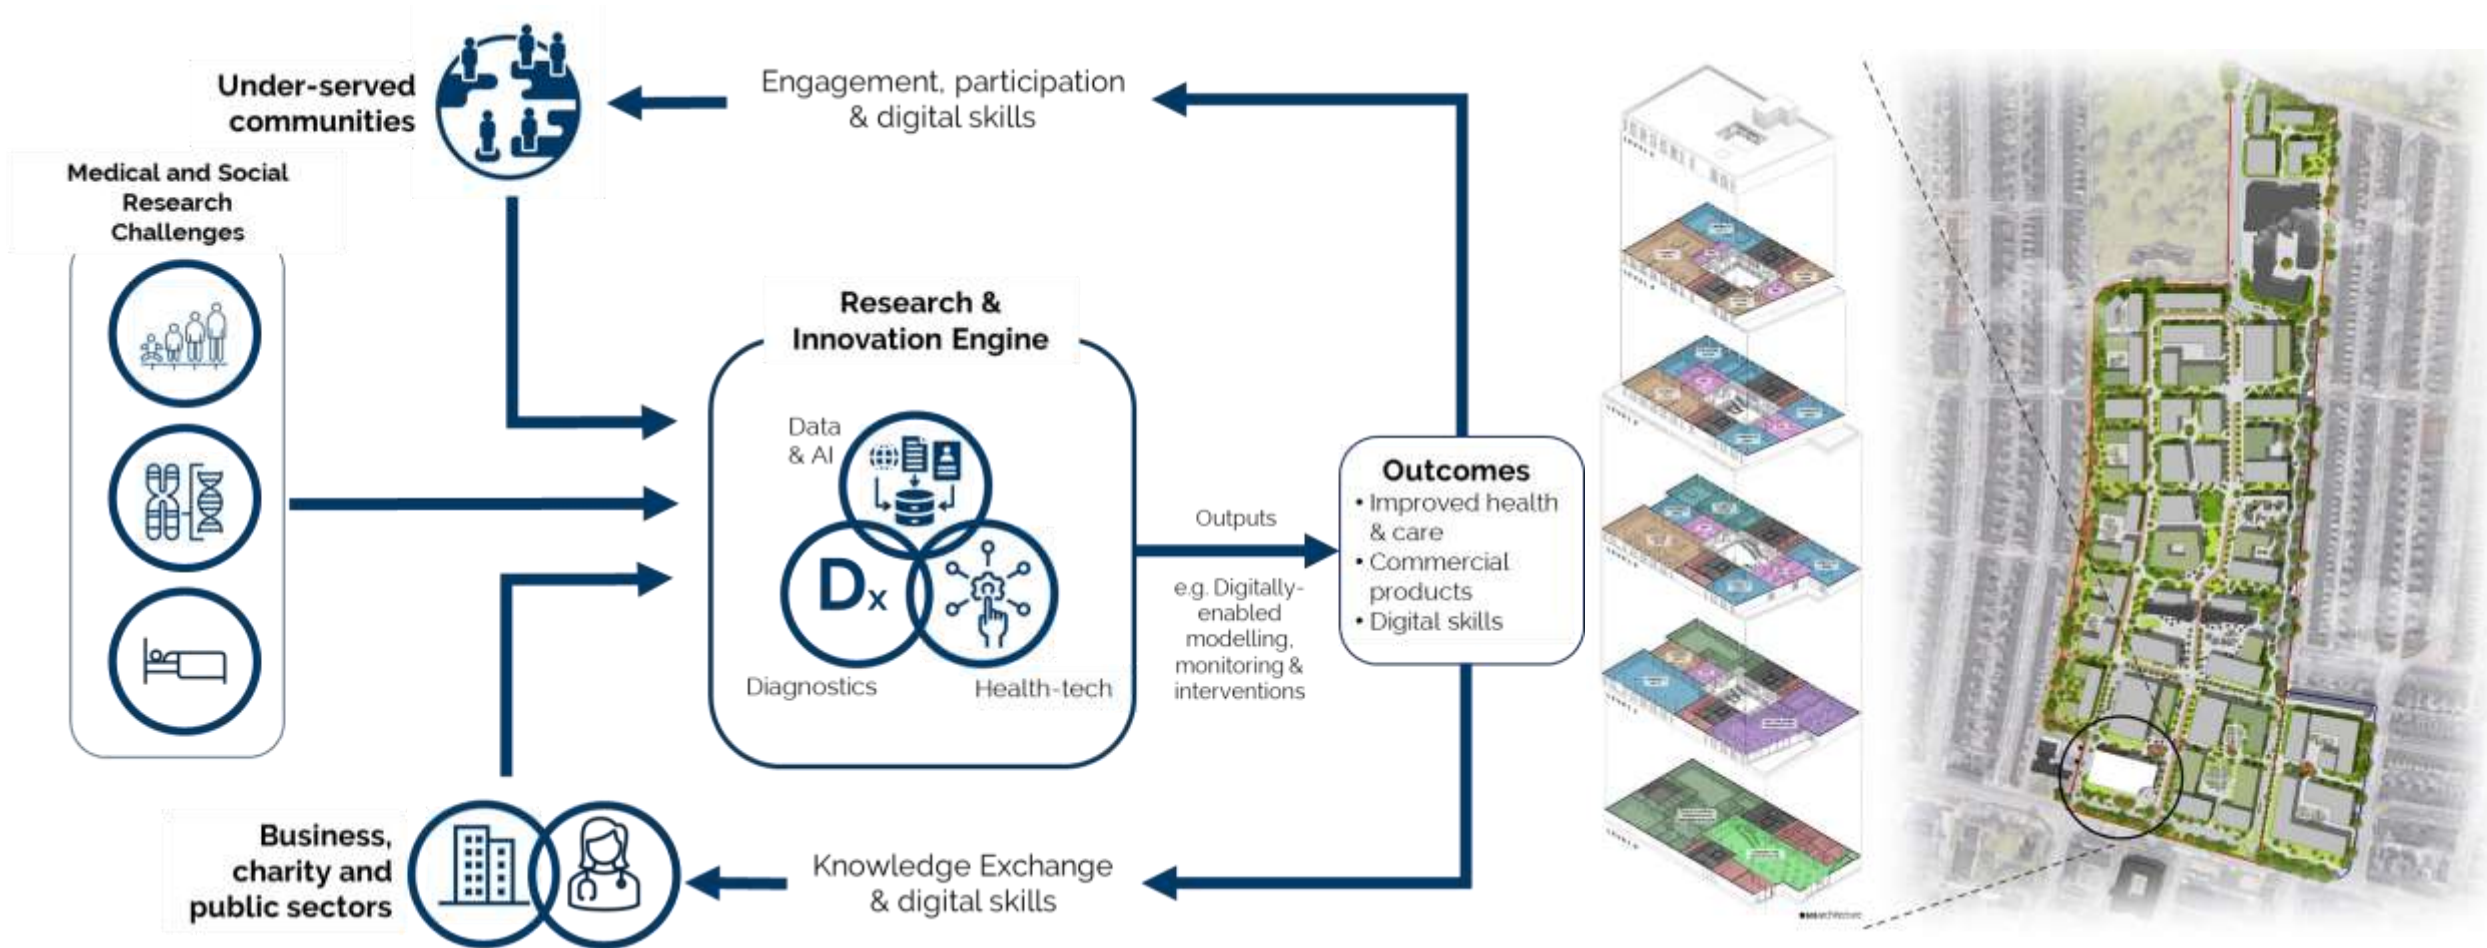

Leverage our assets & expertise in:

- Ageing & health
- Cities, places & sustainability
- Data
- Creative arts

To maximise both the environment on the neighbourhood for the community and its potential as a **living lab** to answer critical questions facing policy makers around the globe

A hub for digitally enabled care everywhere (DigECarE)

Some Reflections / Questions

AHSCs are “international currency” & widely regarded as badges of excellence

- What is the primary purpose of an AHSC?
 - *centre versus system?*
- If un-funded, what is their added value? How does it effect meaningful change?
- Where does an AHSC operate on the translational research spectrum?
- Which body is it primarily accountable to? How will this shape future strategy?

A good hockey player plays where the puck is. A great hockey player plays where the puck is going to be.

Impacts we aim to make

Improved healthcare delivery and services for the AHSC partners through better-connected infrastructure

e.g., creation of local, national and international partnerships driving innovations and supporting improved patient outcomes

Improved research delivery through development of an upskilled workforce who incorporate different disciplinary perspectives

e.g., enhanced capacity building and staff development, career pathway development for staff and increased retention of individuals

Economic impact, net health benefits, increased sustainability of the health and care system

e.g., cost savings or efficiency gains for the health and care system, improving productivity and effectiveness of NHS, net health benefits, revenue generated, broader economic gains, including collaboration with industry *etc*

Strengthened innovation pipeline linking research and healthcare delivery

e.g., embedding research across the entire AHSC and at all levels

Improved experience and utilisation of healthcare delivery systems by diverse patient and population groups accessing AHSC organisations

e.g., activities resulting in improved patient safety (reduced errors, changes in care coordination), commissioning OR decommissioning of a service as a result of research, improving service quality, changes to patient/care pathways, improved management of disease or condition, reduction in health and care inequalities

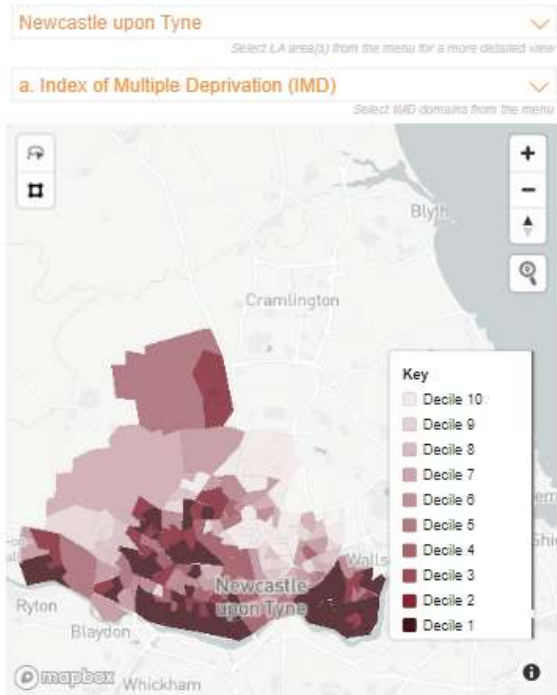

Innovations that have changed practice across AHSCs and been adopted more widely across regions/nationally

e.g., activities that have improved quality of life, improved QALY/ DALYs, influenced policy, and/or led to clinical guidelines or service improvement

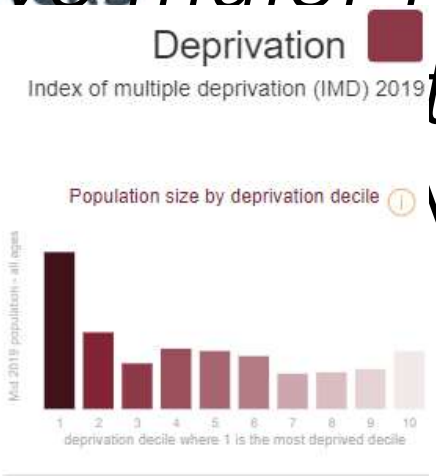

- Data intelligence programme & health inequality

NEWCASTLE HEALTH INNOVATION CENTRE

Duplication to Personalisation combines health & care data across two major NHS Hospital Trusts, Newcastle intelligence system enabled via National Innovation Centre-

The map displays which deprivation decile the neighbourhood (lower super output area) falls into nationally, the darker the red, the more deprived the area.

- 25% of residents live in the most deprived decile 1 & a further 12% in decile 2
- Epre20 population is 37%
- D2P comprises a vast dataset (> 3 million “contacts” with 300,000 individuals over a rolling 2 year period)
- D2P aims to help partners reduce health inequalities & variation in care for targeted groups & individuals, whilst making better use of finite collective resources

NEWCASTLE
HEALTH
INNOVATION
PARTNERS
DISCOVER. DEVELOP. DELIVER

Duplication to Personalisation

Hypotheses we are testing as we improve services

1. There are very high intensity users where a **non-health solution** would be more appropriate - if we take an 'asset' based approach, really listen to what they need, and use our resources flexibly to meet those needs.
"once I joined the group I made a couple of friends, and quickly started to notice my mental health and other symptoms improved"
2. Some **people who most need services aren't getting them** (due to access barriers etc) until its too late. If we can reach them earlier by changing how we deliver services we will enable them to have better health and wellbeing.
'Homeless people and those with learning disabilities, both miss lots of outpatient appointments and both die 30 years younger'
3. Some people have multiple agency input where the responsibility would be **better given to one single person / team**.
"Some weeks I get visits from 4 different people – I'm pretty sure they don't know that and none of them seems to get stuff sorted"
4. Some people who use emergency or crisis services lots could be **better managed in a planned way**.
5. From the **data you can identify who will become high intensity users ahead of time** so you can do something about it.
6. There are **assets in local communities that can help** improve people's health, wealth and wellbeing if health and care professionals engaged with them and behaved differently.
7. In looking at duplication and confusion between different partner organisations we will identify where there is **duplication and confusion within a single provider** that they themselves can fix.
