

## ESA Baltic+ SEAL

The Baltic SEAL project is an eighteen month project funded by the European Space Agency (ESA), under the remit of the Earth Observation Envelope Programme 5 (EOEP5) Regional Initiative.

A key element of the Baltic Regional Initiative Baltic+ SEAL will create and validate a novel multi-mission sea level (MMSL) product for the Baltic Sea (BS).

It will provide an advanced sea-level information product to Baltic Sea stakeholders, and improve the performances of the current ESA Sea Level Climate Change Initiative.

UCC ERI staff are contributing expertise in outreach, stakeholder engagement, and road-mapping for science exploitation.

### Quick Facts

**Start:** 2019

**End:** 2020

**Funded By:** European Space Agency – Earth Observation Envelope Programme 5 (EOEP5) Regional Initiative
